

Student assistant for PentaBase Aalborg

PentaBase A/S is looking for a student assistant in Aalborg who wants to contribute to a department in which quality and efficiency are interdependent. Are you studying to become a bioanalyst, molecular biologist, or biomedical examiner, or do you have another relevant background, and do you want to become part of a dynamic company in growth? Then do not hesitate to apply.

As an employee of PentaBase A/S, your primary tasks will include:

- Understanding and performing various practical laboratory tasks in our laboratory
- Registration, preparation, and analysis of test material
- Swabbing customers
- Operational tasks and trouble-shooting of everyday tasks
- Having direct contact with private and corporate customers and providing customer service by phone and email.

Your education, experience and qualifications:

You are studying to become a bioanalyst, molecular biologist, or biochemist, and have a biomedical or another relevant background. Additionally, we would like you to have:

- Interest or flair for laboratory work
- Interest or flair for with molecular techniques - including real-time PCR
- Interest or flair for ELISA
- Flair for IT and technology
- Experience with drawing blood tests is a plus.
- Flexibility in relation to working hours and place.

Of personal qualifications, we would like you to:

- Be a team player but at the same time know how to work independently
- Be able to work structured and detail-oriented
- Be able to keep an overview in pressured situations
- Possess a driving license
- Live in Aalborg or the surrounding area

[Apply Now](#)

You will be part of a dynamic weekday with great responsibility, high spirits, and a workplace where everyone always gives their best. Working at PentaBase requires a great deal of flexibility, a systematic mind, and the ability to, at times, work at a very high pace. You will be part of a dedicated team of employees who provide COVID-19 diagnostics at a high professional level. Working hours can be between 05:00 - 18:00.

If you are interested, then do not hesitate to send your application and resume. We read applications and conduct interviews on an ongoing basis, and we wish for you to get started as soon as possible.

Send your application to job@pentabase.com.

About us

Since 2006, PentaBase A/S has provided innovative cancer diagnostics to international customers and the Danish healthcare system through PCR-based DNA technology. When the Corona pandemic hit the world in 2020, PentaBase, in collaboration with Rigshospitalet and Novo Nordisk, developed a fast and accurate PCR test, which is the only Danish developed and produced diagnostic tool.

Today, we wish to strengthen our position in the robot technology market combined with PCR-based DNA technology, and we want to be market-leading in improving people's health. We ensure that diseases and possible forms of treatment are detected as early and as accurately as possible. To achieve this ambitious goal, we require the most brilliant minds.
